[47] BRITZELMAYR, Max

Hymenomyceten aus Südbayern. Augsburg & Berlin: 1879-1897

83 hand-coloured plates

Volbracht 259 neu; Stafleu 789; BM (NH) 251. - An „unfindable“ work - so this is an exceptional opportunity to get a very fine set of plates from one of the rarest mycological publications ever published. Britzelmayers Hymenomyceten appeared from 1879 to 1897 in Augsburg and Berlin in different journals or as independent pamphlets. In all, the author presented 3250 species on 762 handcoloured plates, many of them described as new. This collection of 83 plates contains 280 species: 31 plates with Cortinarius (Species 157-249, 294-321), 2 plates with Gomphidius (Nr. 9-14), 13 Hygrophorus (47-100), 1 Paxillus (8, 10), 8 Lactarius (44-66), 21 Russula (41-99), 4 Lentinus (14-20), 2 Panus (10-12, 16-17) and 1 Lenzites (4-6).

The plates are in very fine original colouring. They have been mounted by a former owner in pairs on thick sheets of paper, with the names of species in a fine old handwriting on bottom of the plates. The sheets are loosely inserted in a protecting paper. Oblong-Folio 37,5 x 28 cm Euro 2800

Volbracht 39, 1965; Traverso 1105; BM (NH) p 571; British Libr. 462. C. 14. - An extremely rare gastronomical book with important early information about truffles and the „mushroom-stone“ *Polyporus tuberaster*. The first work is a later edition of an Italian Renaissance book on food by Marc Battista Fiera (1450-1540), a medical doctor from Mantua. It was first published about 1490, dealing with all types of food, giving dietary advice and food safety information. This edition is an extensive comment on the work by Carolo Avantio from Rodigo. Truffles are treated on pages 150-153, other fungi and especially the mushroom-stone „*Fungus lycurcius*“ on pages 45-50 and at one plate. The pseudosclerotium of *Polyporus tuberaster* was for long a mystery. In medieval times it was considered to be a „lynx stone“, created from the coagulation of lynx urine. Later it was called *Lapis lycurcius*, *Fungus lycurcius* or *Pietra fungaja*.

Added to the *Coena* are two „letters“ by Marco Aurelio Severino (1580-1656), a famous anatomist and surgeon from Naples. In his first letter „*De lapide fungifero*“ (p. 167-200) he discusses mushroom-stones and truffles, in the second he describes marine „fungi“ from the Adria calling them „*lapide fungimappa*“ (p. 202-208). Severino presents a complete survey on the knowledge on truffles at the middle of the 17th century. The letters are dated 1642 and 1644.

The work is dedicated to the patrician Johann Georg Volckamer the Elder, the famous physician and natural scientist from Nuremberg, wealthy owner of a silk-factory in Rivereto. In 1685, Volckamer published a recite on Severino's letter on *Lapide fungifero* in the scientific journal *Miscellanea curiosa* (Volbracht 2204). He added the reproduction of a drawing of the mushroom-stone which he had got as a gift from Severino in 1641.

In 1728, the German naturalist Franz Ernst Brückmann, himself interested in petrology and geology as well as in fungi and truffles, considered this work with Severino's letters as *rarissimum* and republished it (Volbracht 1965).

Book in good condition, title slightly soiled, a few browning in margins in the second half of the book. Bound in simple modern boards with label on spine. Euro 3200

p (1-4), 5-40, i-xlvi, (1-6, ind): map and 31 plates
(1-29, 2 unnumbered)

Volbracht 1299; Burdet 350; Ainsworth, p 17; Uellner 1080 & 923; Nissen 1280 (diff. pagination); Paleari-Henssler 1355; Dörfelt & Heklau p 80. - Very rare early treaty on fungi. Count Luigi Ferdinando Marsigli (1658-1730) was an Italian soldier and naturalist from Bologna, well known too for his studies on the oceans and the Danube-river. Giovanni Maria Lancisi (1654-1720) was a physician and anatomist from Rome, who described the spread of Malaria by mosquitoes. In this work, the authors uphold the opinion prevailing since the Greeks that fungi are a product of decaying plants, the mycelium being an intermediate state between corruption and the fungal fruit-body. Several plates show truffles and other fungi and how they grow in the ground. At the beginning of the volume is bound the announcement of Marsigli's great work on the Danube-river, published in 1700, 60 pages, with two nice vignettes. Very nice copy, only few spotting, bound in old half-calf, back richly gilt. 38 cm Euro 2800

p (i-v), vi-viii, (1)-135: Portrait and 217 hand-coloured plates

Volbracht 1555; Stafleu 4470; Junk Rara p 181; Nissen 1496; Krieger p 128. - A very rare work with Paulets magnificent plates. This is the second issue of the work, published originally from 1808 - 1835. Jean Jacques Paulet (1740 - 1826), a French physician and mycologist, had the text of his „Traité des champignons“ printed in 1793, but the distribution of the work started not before 1808 with the first series of the plates and ended in 1835. Paulets nomenclatural approach was not accepted by his followers. So Leveillé (1796 - 1870), a physician and mycologist and one of the discoverers of the basidium, reissued the plates in 1855 with a new text. The 217 plates of the 1855 edition were printed from the original copperplates, marked with a small imprint „J. B. Baillièrre“, then finely hand-coloured. Some of the original plate numbers were changed. In all, there are 217 plates, numbered 1-204 and 13 bis- and ter-numbers. In this

copy, 16 of the plates are from Paulets original edition, on slightly darker paper, some have the new plate-numbers added by hand. Plate 143 is a bit spotted, all the others are nice and clean. The portrait of Paulet is bound in at beginning. The text has a very light waterstain in lower margin, the back of the fore-title is soiled. Bound in old half-cloth with gilt title on spine, binding with some wear (rubbed, hinges cracking, spines worn). 36,5 x 26,5 cm Euro 9500

Volbracht 2168. - Very rare book on truffles by the president of an entomologic society devoted personally to the „propagande truffière“. The book describes exhaustively the knowledge on truffles and truffle-culture 125 years ago. But, in opposition to the prevailing opinion of the Academie des Sciences, the author insists that truffles were galls of truffle-flies and not fungi. („Pour l'obtenir a volenté, il faut le chêne truffière et la mouche truffigène“). Nice copy bound in modern gilt decorated half-leather, golden title on spine. 15 cm Euro 1400

p (i, i-ii), iii-iv: 1 fig.

Volbracht 2190; Vicaire 864; Paleari-H. 1009. - A work by an Italian „Professor di rettorica“ of great rarity, especially in this Italian edition and including the lovely engraved vignette with two truffles-hunters and their dog. Usually, this engraving is only part of the latin edition published the same year. (Paleari-Henssler's „Bibliografia latina-italiana di gastronomia, 1984, lists the italian edition without the figure.) Vigo praises the white Italian Piemont-truffle as superior to the black french Perigord-truffle - an early example of the truffle-concurrence between the Italians and the French - called „Gastrochauvinism“ by the truffle-historian Rengenier C. Rittersma. The copy has an old exlibris of Rouvier de Vaulgran and a stamp of Mario Cermenali on title. Bound in contemporary full leather with gilt title on spine. Surface of leather somewhat acid-decayed. 23 cm Euro 3100
